

World Environment Day 2026

Growing a Greener Future Together

On 5 June 2026, ERGON Foundation celebrated World Environment Day at Pirappan Valasai, Ramanathapuram District, Tamil Nadu. Around 90 people participated in the programme, including migrant workers with their families and members of the fishermen community. The activities were organized under the theme "Inspired by Nature. For Climate. For Our Future" (#NowForClimate). The event was officially registered on the World Environment Day Global Map, and all activities were planned based on the theme for the year.

The programme started with a beach clean-up activity. Participants worked together to clean the seashore and learned about the importance of keeping the environment clean. An awareness session was then conducted for the migrant workers with their families, explaining why World Environment Day is celebrated and why protecting nature is important for our future.

One of the main activities was tree planting. Migrant workers with their families planted around 20 neem saplings of different varieties. Neem trees were chosen because they grow well in coastal areas, can survive in dry conditions, help prevent soil erosion, and improve the environment. Saplings were also distributed to members of the fishermen community and families, encouraging them to plant and care for trees in their surroundings.

All participants took an environmental pledge to plant trees, protect natural resources, keep their surroundings clean, and preserve the environment. They also took part in a Thumbprint Commitment Canvas activity, where they placed their thumbprints as a sign of their commitment to protecting nature. The activity was enjoyed by both adults and children and received enthusiastic participation.

The programme successfully brought the community together to learn, act, and contribute towards a cleaner and greener future. Through beach clean-up, awareness creation, tree planting, and community participation, the event encouraged everyone to become responsible caretakers of the environment.
